

## AD001 - Spirit Gum & Remover Combo

### Adhering Prosthetics

Begin by determining the area where the prosthetic will be placed. Check for proper alignment and sizing. The edges can be trimmed for a better fit. Brush Cinema Secrets Spirit Gum onto the back of the prosthetic, or for larger pieces, directly onto the skin. For best adhesion, tack the Spirit Gum on the appliance or the skin by gently tapping it with your finger. Once it starts to feel sticky, position the piece and press down. For larger prosthetics, apply and tack the Spirit Gum in small sections, working around the piece until it is completely glued down.

### Applying Facial Hair

Apply Spirit Gum starting under the chin and jaw line. Tack and press in place the ends of small amounts of loose hair in the desired length. By gluing down only the tips, you will achieve the effect of it growing out of the skin. Move from the outermost areas of the face, inward, layer by layer, gluing down the hair in the same way as you would shingles on the roof of a house.

### Removal

Remove any excess blood from the piece and skin with warm water and a paper towel. Using a small brush or cotton swab, work a small amount of Cinema Secrets Makeup & Adhesive Remover under the edges of the prosthetic, being very careful around the eyes. Once the piece is off, use the adhesive remover to clean off any residual makeup and spirit gum. Rinse the skin with warm water.
