

PW014 - Colorless Powder

Directions

Sprinkle a small amount of Colorless Powder onto a powder puff. Fold the puff in half, and rub lightly, working the powder into the puff. Unfold, and gently shake off any excess powder still on the surface of the puff. Press the puff onto the makeup (do not rub), covering the whole surface. This absorbs the excess oils in the makeup, setting it in place. To get rid of the powdery look, use a moist towel or powder brush to blot out the excess powder.

To ease the application of a large prosthetic appliance hold the prosthetic on the face. Using a powder puff and Colorless Powder, heavily powder the edges of the appliance overlapping onto the skin. When the appliance is removed, you will have a clear, powdery outline of where the appliance will lay, and where the glue should be applied.
